SUMMARY

Emerging AI professional specializing in Generative AI and LLM-based systems. Developed production-grade AI applications, including RAG pipelines and task-based chatbots, utilizing LangChain and FastAPI. Designed document ingestion and vector search workflows while optimizing multi-step reasoning agents for real-world deployment.

SKILLS

Generative AI • LLMs • RAG Systems • AI Agents • Prompt Engineering • LangChain • LangGraph • Python • FastAPI • API Integration • FAISS • Qdrant • Pinecone • SQL • Postman

PROJECTS

NeuroHealth - AI-Powered Health Assistant | *LangGraph, LangChain, FAISS, BM25, Python, BeautifulSoup*

- Built a layered AI health assistant using LangGraph orchestration and hybrid RAG pipelines.
- Implemented risk classification, structured symptom extraction, and evidence-grounded retrieval using FAISS + BM25.
- Developed medical web scraping and document ingestion pipelines for healthcare knowledge retrieval.
- Added safety-focused reasoning workflows to reduce hallucinations and improve response reliability.

AI Resume Analyzer | *LangGraph, FastAPI, Python*

- Built an LLM-powered resume analysis tool that compares resumes with job descriptions.
- Extracts missing skills, calculates match score, and generates improvement feedback.
- Implemented PDF/DOC parsing and SQLite database storage for resumes and job descriptions.

LLM Chatbot | *LangChain, Python, Streamlit*

- Developed a conversational chatbot using OpenAI API and LangChain.
- Implemented prompt templates and basic memory handling for improved interaction.

ACHIEVEMENTS

- Open-source contribution to Google DeepMind's project, Concordia.
- Contributing by adding a Groq LLM model wrapper, enabling users to run simulations using Groq models.

EDUCATION

Bachelor of Computer Applications (BCA)

Regional College of Professional Studies and Research - MJPRU University, Bareilly Uttar Pradesh

Expected in January 2027
